- Installation
- Source Code Structure

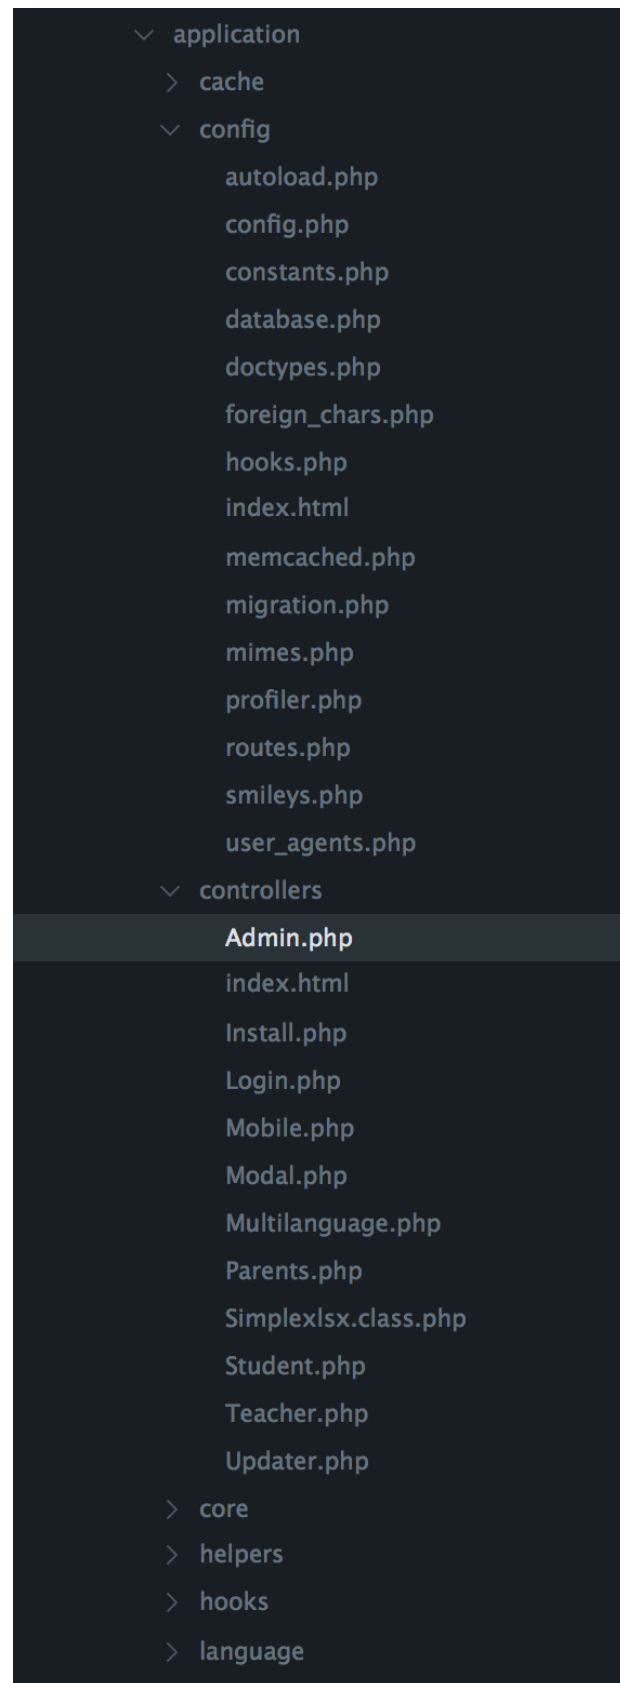

## Installation

- Upload the downloaded zip file to your server public\_html directory
- Extract the zip file
- Create a new database from your server MySQL
- Create a user to the database and link the user to the database with all necessary permissions
- Open the file database.php from the directory /application/config/database.php
- Fill up the information named 'hostname', 'username', 'password', 'database' with your created database information
- Open the file routes.php from the directory /application/config/routes.php and change 'default\_controller' from 'install' to 'login'
- Now from your server phpmyadmin go to your database and import install.sql located in /uploads/install.sql
- Now type the url in your browser and you are good to go.
- Default admin credentials

Email: [admin@example.com](mailto:admin@example.com)

Password: 1234
